

- Q. 1 A 30 years old male has history of fall from 10 feet height, on arrival in emergency department patient was unconscious after 10 mins he become conscious, then again become unconscious with left sided weakness. Most probable patient is suffering from
- ☒ A. Right sided acute subdural hematoma
 - ☒ B. Right sided epidural hematomas
 - C. Bifrontal contusion
 - D. Left sided acute subdural hematoma
 - E. Left sided epidural hematoma
- Q. 2 02 months old baby girl on presentation at your clinic, you notice baby had swelling over low back patient had associated lower limb weakness, what is your diagnosis regarding this case
- A. meningocele
 - B. lipomyelomeningocele
 - C. tethered cord syndrome
 - ☒ D. meningomyelocele
 - E. myelocystocele
- Q.3 15 month old baby presented at your clinic, you suspect low back mmc, with tethering of cord what is diagnostic test for this condition?
- A. Ct scan brain + l/s spine
 - B. Mri l/s spine plain
 - C. Mri lumbosacral spine with contrast
 - D. Xray l/s spine
 - E. Emg Ncs
- Q.4 20 years old boy has history of RTA. On examination patient was opening eyes on painful stimulus, withdrawal to painful stimulus, with in appropriate words. Calculate GCS
- A. 15
 - B. 9
 - C. 10
 - D. 8
 - E. 11
- Q-05 15 month old baby presented at your clinic, you prescribed MRI l/s spine and appreciate abnormal low lying conus what is your diagnosis?
- ☒ A. meningocele
 - ☒ B. lipomyelomeningocele
 - ☒ C. tethered cord syndrome
 - ☒ D. meningomyelocele
 - ☒ E. myelocystocele
